TEXT SIGNALS CHEAT SHEET:

Usually you will get three texts per trade. One from each of these sections:

These first three tell you what and how to enter:
New Signal: Tells you what to buy or sell and at what Max price, when indicative hits a certain price level
Cancel Existing: If price never hits that level or turns around before entry will tell you to cancel working order
Enter Now: This will tell you what strike and prices to enter- not waiting on the Indicative to reach a certain level- but entering NOW at max risk / price

Then once we have entered, instructions on how to manage:
Filled Set Stop: We were filled at "x" price and our stop is at "$x" price and take profit is at "X" price
Filled No Stop: We were filled at "$x" price, no using a stop, take profit is set at "$x"

Outcome/Updat
es:
Profit Target Reached: Our take profit price was hit. Trade is closed, cancel out your stop order if there was one. If not yet in trade cancel limit order to get in. Exit now if still in trade
Stop Reached: Price hit our stop, so losing trade, trade is closed. Cancel take profit order. Exit if you are still in trade. If never got in cancel working order if still have one
Exit Now: Don't wait for take profit to be hit or stop. Exit now- maybe for profit maybe loss, but exit ASAP. Cancel all stop orders and working profit orders. Close out all
Expired: Trade expired before stop or profit target hit. For loss or profit
